

## The Benefits of CEREC Connect:

- Immediate digital case submission eliminates shipping cost, wait time, and hassle
- The precision and accuracy of CAD/CAM technology
- High strength restorations with customized aesthetics
- Digital workflow = Faster production turnaround time
- Effortless duplication with saved digital design file
- Competitive low pricing

## Questions? Call to speak with Dr. Alan Jurim today!

Prior to obtaining his dental degree, Dr. Alan Jurim received his dual degree in Computer Systems Engineering and Electrical Engineering at the prestigious Rensselaer Polytechnic Institute. His strong background in engineering and computer technology has proven to be an invaluable asset in teaching many doctors and dental teams how to integrate modern dental techniques into their practice. Dr. Alan Jurim works in private practice and heads the CADpro CAD/CAM department at Jurim Dental Studio. His clinical and laboratory skills allow Dr. Jurim to provide helpful one-on-one counseling for dentists to ensure every CADpro case completed by Jurim Dental Studio is a success. Dr. Alan Jurim is a member of the American Academy of Cosmetic Dentistry and the American Society for Dental Aesthetics, and his work has been prominently featured in CERECDoctors quarterly magazine.

As a preferred CEREC Connect lab, Jurim Dental Studio can work with you to provide incredibly precise-fitting CAD/CAM restorations made from the highest-quality ceramics with the artistic finish that only a skilled dental technician can achieve where enhanced aesthetics and characterization is needed.

### **What is CEREC Connect?**

CEREC Connect is a service we offer to easily share CEREC case files directly from your office to ours through the internet. This eliminates the costs, wait time, and aggravations associated with shipping your case to our office.

### **What is the benefit of working with a CEREC Connect laboratory like Jurim Dental Studio?**

Part of the beauty of being a CEREC Connect lab is the speed with which we receive your case files. We can receive a scan in a matter of minutes to be previewed and confirm its quality while the patient waits in the chair and recommend any adjustments or recapturing if need be right then and there. This eliminates the need to reappoint a patient due to faulty impressing.

### **How much is a CEREC Connect restoration?**

Jurim CEREC Connect cases start at \$79 a unit. By eliminating the cost of model fabrication and shipping, our savings are passed onto your office.

### **How long does it take to get CEREC Connect cases back?**

Turnaround time is as little as 2 days in lab if the case is received by 3pm. Rush cases can be pre-planned for those with time constraints.

### **What dental restorations can I make using CEREC Connect?**

CEREC Connect can be used to submit digital impression files to fabricate all types of dental restorations in varying restorative materials. This includes CADpro Temps™, veneers, inlays/onlays, crowns, and implant abutments and crowns made from TelioCAD (a long-term provisionalization PMMA material), IPS e.max, Zirconia, and more.

### **Can I view my CEREC Connect restoration before it's made?**

Just as easy as it is for you to submit your digital file directly to us through CEREC Connect, we can in turn use CEREC Connect to email you the CAD design file of your desired restoration to be previewed and approved before it is milled. With CEREC Connect you can easily relay any desired changes to us, ensuring you receive the exact restoration design you want.

### **Can I customize my CEREC Connect restoration?**

The Biocopy feature in the CEREC digital impressing workflow allows you to include a scan file that will be used to guide the design of your final restoration. For example, if the patient loves their provisional, you can biocopy scan it and send that file to us along with the digital impression via CEREC Connect and we will design the final restoration to be an exact copy.

### **Do I need to have a CEREC Connect machine to send digital impressions to Jurim Dental Studio?**

No, we can work with most all digital impressing systems. While the CEREC Connect submission process requires that you have a Sirona compatible acquisition unit for your digital impressing, you can still easily send us any digital impression for fabrication of any desired dental restoration. So whether you have the Trios® scanner by 3Shape, the iTero scanner by Align Technology, the E4D scanner by D4D, or any other scanner, you can effortlessly email us the resulting digital file.

### **Why is digital impressing so important to your office?**

The benefits of digital dental impressing are endless. From eliminating multiple fabrication steps that potentially introduce distortion into the final restoration to decreasing lab costs and fabrication time, digital impressing is far superior to traditional dental impressions. Digital impressions also improve the patient experience by eliminating the need for ill-tasting conventional impressions and they increase productivity by cutting down on chairtime as the scanning process is very quick and accurate.
